

JB³Ai Forensic Intelligence & Investigation Systems

Evidence-grade intelligence and investigation support for personal, corporate, legal, cyber, and asset-risk matters.

Founder-led intelligence

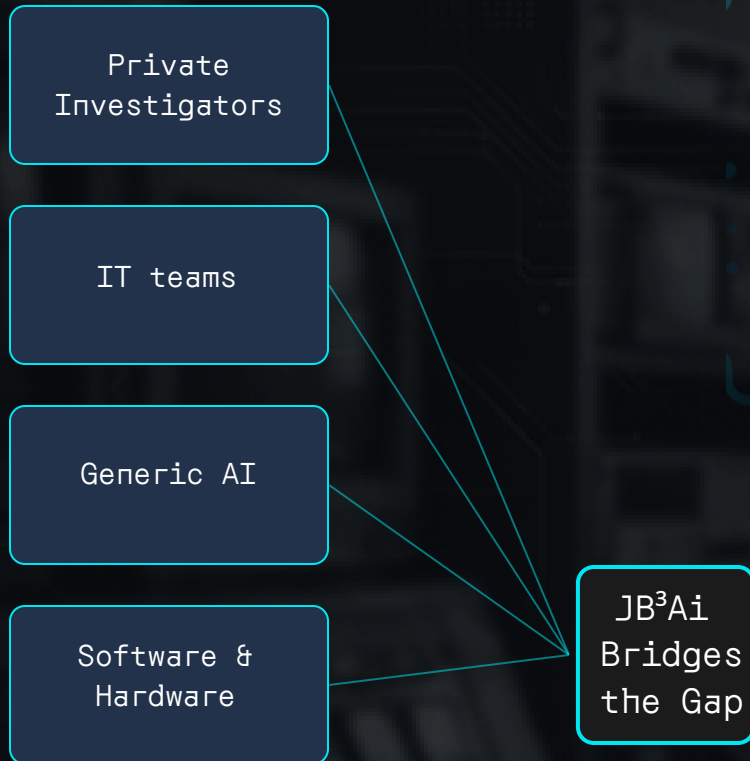

Human + AI fusion

OS³ command architecture

Discreet. Lawful. Auditable.

A handwritten signature in white ink, reading "Jonathan Blackburn". The signature is stylized and fluid, with a long horizontal line extending from the end.

Jonathan Blackburn
Founder & Director, JB³Ai

The Intelligence Gap

Most investigations fail in the space between people, systems, evidence, and technology.

Traditional investigators often understand human behaviour but not complex digital systems.

IT teams understand networks but are not trained to preserve legal evidence.

Generic AI tools can process information, but they do not understand context, admissibility, or risk.

JB³Ai bridges that gap.

"True intelligence is not just finding data. It is turning scattered signals into a lawful, evidence-grade narrative."

I have spent my life learning how machines work, how data is secured, and most importantly, how human beings behave when they are put under extreme pressure. I do not just run background checks, I use advanced digital systems to cut through the noise, find the absolute truth, and protect your business.

The Forensic Backbone

"JB³Ai is the third evolution of a founder journey forged in engineering, recovery, diagnostics, and intelligent forensic systems."

Elite Technologies built the electronic engineering foundation: automation, signal flow, control rooms, boardrooms, networks, and custom systems. iMED Medical Group added forensic discipline: ISO laboratory thinking, chain of custody, laboratory information platforms, toxicology, DNA, molecular diagnostics, and zero-error operational pressure.

JB³ now brings those worlds together: systems engineering, forensic integrity, AI automation, and real-world investigation.

True technical expertise isn't gained in a classroom; it's honed through real-world challenges. In 2006, at 18, I started Elite Technologies with just a soldering iron and a backpack. Beginning with door-to-door sales, I expanded the business over 14 years into a major national technology firm, designing and implementing secure boardrooms and automation centers for top corporations.

I founded Trust in Hope, a registered halfway house in Pretoria, and covered its operating losses to create a structured environment for those rebuilding their lives. I've witnessed people at their lowest and highest points, gaining deep insight into the psychological triggers that lead individuals to defy rules.

"I provide a holistic forensic approach, combining 20 years of deep-stack cyber and network infrastructure knowledge with specialized financial OSINT to trace assets through both the ledger and the wire."

JB³Ai and
OS³ Intelligence Systems

With over a decade of experience building corporate networks, I identify hidden security blind spots and understand how complex technology can create dangerous information voids. Unlike standard IT technicians, I analyze raw physical data to detect anomalies and know how white-collar criminals exploit these weaknesses. I also have the expertise to effectively shut down these threats.

In the forensic medical world, a single mistake destroys lives and ruins court cases. I bring this exact same "zero-error" mentality to your corporate investigations. The evidence we gather is mathematically proven, locked down by biometric security, and 100% ready to survive cross-examination in the High Court.

DNA & Molecular Genetics certified in Essential DNA Sequencing through DNAbiotec (2021) deep technical literacy required to troubleshoot complex biological sequence data. ISO Quality Management: certified in ISO 9001:2015 QMS Implementation and Auditing, e Certified in Applied ISO 14971 Medical Device Risk Management,

What We Do

Personal, corporate, legal, cyber, and asset intelligence.

01

Personal OSINT
Open Source
Intelligence
&
Digital Footprint
Intelligence

Social Media Intelligence (SMINT) is the forensic analysis of information residing within global social ecosystems. While much of this data remains invisible to the casual observer, our unit utilizes sophisticated, structured data calls to extract insights that users often believe are private or ephemeral.

02

Business & Corporate
Due Diligence:
People Intelligence.
Business Intelligence.
Threat Intelligence.

Legal Excellence: Precise
Evidentiary Intelligence
We provide legal teams with the power of verified intelligence. From case preparation and evidence gathering to rigorous due diligence, we enable attorneys to build unassailable cases and achieve superior outcomes for their clients.

03

Fraud, Legal &
Asset Recovery
Support |
Fiat &
Cryptocurrency

Fraud: Exposing Deception
JB³Ai equips insurance professionals with sophisticated tools to detect and combat sophisticated fraud rings. By utilizing advanced OSINT capabilities, we identify fraudulent patterns, streamline claims investigations, and safeguard your organization from multi-million dollar financial losses

04

Cyber, Dark Web
& Exposure
Monitoring

We aren't just "cyber-forensic" experts; we are digital architects. We understand the "Old World" legacy banking systems of Southern Africa as intimately as the "New World" of DeFi and AI.

Dark Web and Darknet Analysis:
We identify compromised credentials, stolen data, illicit trade, and hidden threat activity across dark web

05

Satellite,
Geospatial
&
Infrastructure
Intelligence

Hyper-Local Geospatial Data:
New initiatives are bridging the "data gap" in infrastructure and land reform, using OSINT to monitor land use and community-private partnerships through localized satellite and public record analysis.

All engagements are scoped around lawful collection, privacy protection, evidence handling, and practical decision support.

Personal OSINT & Digital Footprint Intelligence

For individuals, families, attorneys, private investigators, and sensitive personal-risk matters.

We identify online exposure, impersonation indicators, scam signals, reputational risk, social media patterns, and open-source identity connections.

CAPABILITIES

- Lawful open-source research
- Digital footprint review
- Exposure and privacy mapping
- Scam and impersonation indicators
- Social media pattern analysis
- Privacy-preserving reporting
- Missing persons

Criminals think they can hide stolen money on the internet. They are wrong. We use air-gapped Financial Investigative AI to track complex money laundering paths. We analyze massive banking files and bypass cryptocurrency "mixers" (CoinJoin) to track stolen assets directly to the physical devices used by the thieves.

We don't just do basic web searches. We dig into the deep web to map out hidden relationships between your employees and outside vendors. We find the corporate moles, track intellectual property theft, and run bulletproof background checks before you sign massive contracts.

Business, Legal & Corporate Intelligence

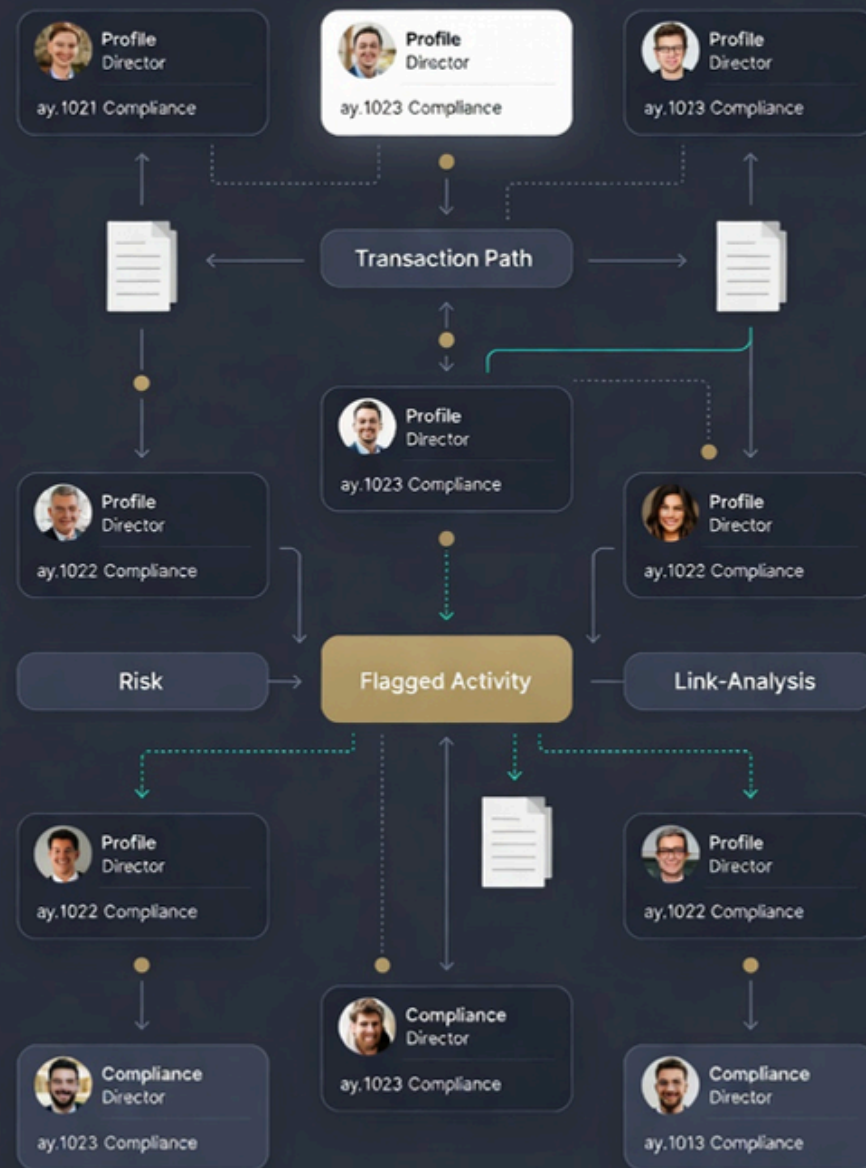

For companies, attorneys, auditors, insurers, investors, and risk teams.

"Business risk rarely sits in one place. It hides between people, companies, transactions, devices, and behaviour."

CAPABILITIES

- Corporate due diligence
- Director and entity mapping
- Supplier and vendor risk
- Fraud pattern review
- Lifestyle and means indicators
- AML support
- Litigation intelligence
- Asset and relationship mapping
- Business exposure assessment

Corporate Due Diligence Intelligence Map

Cyber, Dark Web & Asset Recovery

JB³Ai supports complex cyber and financial-risk matters through lawful intelligence workflows, breach exposure review, wallet mapping, infrastructure analysis, and evidence-grade reporting.

CAPABILITIES

- Deep and dark web monitoring
- Breach exposure review
- Crypto wallet and transaction mapping
- Shell-company linkage indicators
- Digital alias correlation
- Asset recovery intelligence
- Infrastructure path reconstruction
- Cyber-forensic sprint support

JB³ Digital Forensics Unit. Designing custom neural language models, cyber-forensic asset recovery tools, and satellite perimeter setups for major corporate clients.

Satellite & Geospatial Intelligence

The modern eye in the sky.

Geospatial intelligence supports land, infrastructure, asset, mining, agricultural, and perimeter-risk matters.

CAPABILITIES

- Satellite imagery review
- SAR cloud-penetrating analysis
- NDVI vegetation indicators
- Illegal mining and land-use indicators
- Remote asset-location support
- Infrastructure monitoring
- Temporal movement comparison
- Site-risk reporting

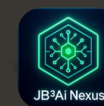

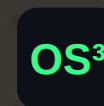

Utilizing OS³ ViewGrid satellite assets, Synthetic Aperture Radar (SAR), and automated change-detection indices (BSI/NDVI) to identify physical perimeter breaches, illicit land use, and tactical incursions through cloud cover and total darkness.

Satellite Security , We extend your security perimeter into space. We use high-end satellite radar to monitor your remote assets, spotting illegal mining, perimeter breaches, or trespassing through thick clouds and total darkness.

The OS³ Command Layer

InvestigatorAi. ShieldAi. SVIS. Custom intelligence dashboards.

JB³Ai does not only produce reports. We build command environments that help teams capture, analyse, preserve, and act on intelligence.

PLATFORM COMPONENTS

- InvestigatorAi custom dashboard
- OS³ intelligence command view
- ShieldAi risk and exposure layer
- Secure Voice Intelligence System
- Evidence vault
- Timeline reconstruction
- Link-analysis workspace
- Tasking, case notes, and reporting

OS³ Dash Workflow Automation] Once we eliminate the active threats from your business, we structurally repair your daily operations. We build custom, automated business command centers (OS³ Dash) utilizing advanced robotic process automation (RPA) bots.

These customized dashboards eliminate manual data entry, connect your disconnected files, and streamline your operations so you can regain your focus and aggressively scale your company.

"Intelligence becomes powerful when it is structured, searchable, auditable, and usable."

The Forensic Gold Standard

Data is only useful when it can be trusted.

JB³Ai applies forensic thinking to every intelligence workflow.

PRINCIPLES

- Clean-room handling
- Source logging
- [HASH] Hashing and preservation
- [COC] Chain-of-custody principles
- [REDACT] Redaction and privacy controls
- [AUDIT] Audit trails
- [EVID] Evidence registers
- Court and boardroom-ready reporting
- POPIA-aware workflows
- Data sovereignty preference

"Your data must be explainable, repeatable, and defensible."

"I have analyzed human beings at their absolute lowest points of survival and their absolute highest points of corporate success. I deeply understand the psychological triggers that drive people to break the rules, commit corporate fraud, or steal intellectual property from their employers. This street-level insight, combined with my strict technical engineering background, allows me to predict threat actor behavior, locate internal moles, and dismantle corporate syndicates from the inside out."

Applied Intelligence Scenarios

PAGE 11 OF 13

Confidential. Scoped. Evidence-led.

01

Ghost Asset Recovery

CHALLENGE

A high-value subject claims no liquidity during a recovery action.

INTERVENTION

Open-source financial indicators, relationship mapping, shell-entity review, wallet and alias correlation.

OUTCOME

A structured intelligence report supporting asset-location strategy and legal escalation.

02

MAZAZANI MineVoiceGrid

CHALLENGE

High-risk industrial environment with communication gaps, multilingual floor language, and security concerns.

INTERVENTION

Secure voice capture, transcription, translation, anomaly detection, and overnight synthesis.

OUTCOME

Operational intelligence layer for security, safety, and early-warning review.

Field Intelligence & Private Investigation Capability

Through our operational partnership with Eagle Star Security, JB³Ai can support matters requiring a combined intelligence and field-investigation approach.

JB³Ai provides the intelligence layer. Eagle Star provides the field capability. Together, the result is a lawful, evidence-led operating model.

Private Investigation Support

Capabilities may include corporate fraud enquiries, internal theft investigations, workplace misconduct reviews, background checks, due diligence, and evidence gathering where legally permissible.

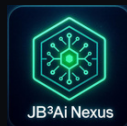

Corporate fraud investigations - Internal theft inquiries - Reviews of workplace misconduct - Background checks - Due diligence - Drug & Alcohol - Spouse or Partner - Threats of Violence - missing persons

Undercover Agent Operations

For high-risk environments affected by shrinkage, collusion, drug-related workplace risk, or internal compromise, Eagle Star's undercover capability provides discreet, structured field intelligence.

This specialized service is led by Jonathan Blackburn and the associate company Eagle Star Security. EagleStar brings years of undercover experience, followed by a focus on distribution center management. His department was developed based on a practical understanding: many business losses originate not at the perimeter, but within the operation itself.

Undercover agents may be placed within an approved client environment for a defined period, usually three to six months, subject to legal review, mandate approval, and operational risk assessment. Their role is to observe, document, and report on internal theft, stock shrinkage, illegal workplace activity, collusion, compromised staff behaviour, and evidence of criminal conduct where legally permissible.

PSIRA-Aligned Field Operations

Regulated security and private investigation activities are handled through PSIRA-registered operational partners where required. POPIA-Aware Intelligence Handling

SAPS-Cleared Operational Personnel

Where applicable, field personnel are vetted and cleared for operational deployment according to partner compliance standards.

OHS & Site Safety Awareness

Operational work is scoped with health, safety, access-control, and site-risk requirements in mind.

Evidence Handling Discipline

Digital and physical evidence is managed through source logging, chain-of-custody principles, audit trails, and defensible reporting.

Personal information and case data are processed under privacy-preserving workflows, redaction controls, secure storage, and lawful-purpose requirements.

Compliance, Privacy & Legal Disclaimer

JB³Ai operates within a strict ethical, legal, and evidentiary framework. OSINT, cyber-forensic, digital footprint, and reporting services are conducted with lawful purpose, source logging, privacy controls, and evidence-preservation principles.

Where regulated security, guarding, undercover, or physical investigation services are required, these are delivered through appropriately registered operational partners, subject to mandate, scope, jurisdiction, and legal approval.

All personal information and investigative material is processed in accordance with POPIA and applicable confidentiality obligations.

This brochure is general information only and does not constitute a risk assessment, legal opinion, deployment order, or binding contractual offer.

Engagement Model

Confidential. Scoped. Evidence-led.

1. Confidential intake
2. Risk and objective definition
3. Lawful data-source mapping
4. Intelligence sprint
5. Evidence-grade report
6. Advisory, escalation, or dashboard deployment
